

Decentralized Human Resource/Freelance Hub

Freelancing has taken over the market by storm following the advent of the internet due to the nature of it - work that doesn't need to be limited to a location can be sourced from anywhere, after all, and creates endless possibilities.

[Pension Rewards](#) is a decentralized human resource hub and global freelancing platform. It gives users the opportunity to interact, communicate and trade their skills and experiences with others on the internet. The core idea of the project is to decentralize job opportunities, accept and embrace various skills, breaking the chains of unemployment that bind many people today.

Pension Rewards tends to solve a crucial societal problem and creating a decentralized platform, while on the platform, we believe will revolutionize the global social ecosystem and yield a long term growth globally by creating a platform where anyone can work on simple tasks, businesses can benefit and both the parties add value to the ecosystem and earn on the go. They can make transactions in main cryptocurrencies or the base payment coin PCoin (*Conditional) tokens.

The Problem exists and the Solution is viable. We are the ERC20 decentralized version of existing centralized freelance platforms with also the aim of spreading the adoption rate of blockchain and cryptocurrencies. The capabilities of blockchain is set to add a layer of transparency around the ecosystem as this approach allows for fake and un-verified profiles to be easily eliminated and any scammers are also kept away. Smart contract technology will be replacing domestic escrow and other domestic functions.

The goal is using blockchain efficiently in such a way that the platform users will never have any idea of them using a decentralized system. Our token is the only medium of exchange of services on the platform. We will allow other cryptos but they won't be used directly to get services but can be used to purchase our tokens and be used.

Users interacting on the platform will be rewarded with the PCoin tokens and this is a good tactic for user base acquisition and retention. Users can also earn tokens by performing micro-tasks on the platform such as been hired, referring friends and attending and joining events.

We will empower the world's freelance/workers community by creating one of the largest worker-centric decentralized ecosystem where independent workers can pursue their passions and get the value they deserve from the gig economy. Smart-contracts are a great tool for online freelancing. Some freelancers may prefer to work through an organized system that is transparent and trust worthy.

The Pension Rewards is leveraging on the innovative distributed technology of Blockchain with partnership from experts, social media analysts, tech developers, ICO experts, brand influencers and managers of both Finance and human resource industry to launch the Pension Rewards platform on the blockchain and creating the Pension Coin to be issued during its Initial Coin Offering, with the plan to build a sustainable community for the freelance enthusiasts, offering them timeless opportunities to earn rewards through cryptocurrency backed platform.

Our token gives strength to the value of the Platform and by doing so, it gives value to the token as well and one of the advantages of owning Pension Coin [Pcoin] is that it gives you an opportunity to own a coin in of the fastest growing ecosystem on the blockchain. PCoin use cases will not be limited to the platform alone.

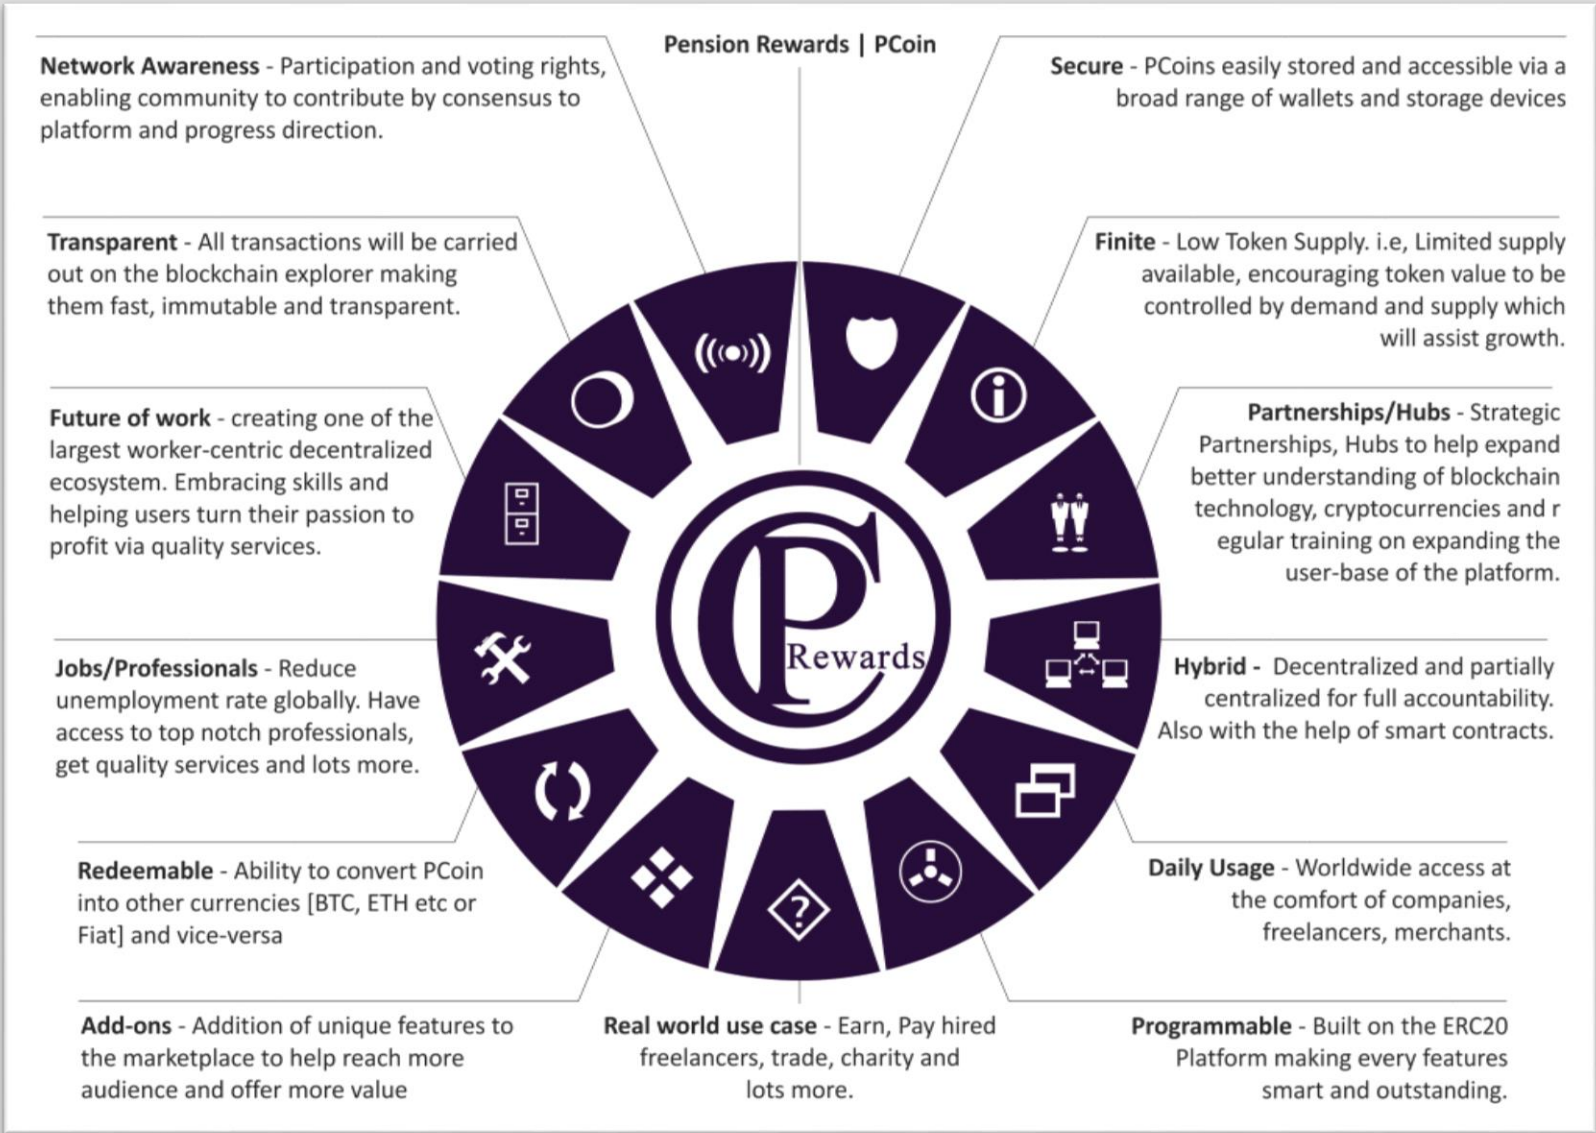

The world has PROGRESSED and now we need PEOPLE who think CREATIVELY, INNOVATIVELY, AUTONOMOUSLY, CRITICALLY, INDEPENDENTLY, with the ABILITY to CONNECT. We aim to empower the world's freelance/workers community by creating one of the largest worker-centric decentralized ecosystem where independent workers can pursue their passions and get the value they deserve from the gig economy. We are not the first, but we can be the best.

PCoin will be usable worldwide – Use it to pay hired freelancers on the platform [crypto token for freelancers and employees], exchange on Crypto trading sites, or exchange into your preferred fiat currency and lots more.

PCoin is going to be issued with a limited amount, therefore, once PCoin spread globally, demand of the token usage on/outside the platform and supply will play its role in value for investors/freelancers to benefit.
