Pension Rewards tends to solve a crucial societal problem and creating a decentralized platform, while on the platform, we believe will revolutionize the global social ecosystem and yield a long term growth globally.

The idea is to create a platform where employee/employers can connect with clients on a blockchain powered platform. Freelancers, businesses, companies, organizations and even the government can benefit while all parties add value to the ecosystem and earn on the go, making jobs available to job seekers. Transactions are in main cryptocurrencies or the base payment coin Pcoin (*Conditional) tokens.

The world has PROGRESSED and now we need PEOPLE who think CREATIVELY, INNOVATIVELY, AUTONOMOUSLY, CRITICALLY, INDEPENDENTLY, with the ABILITY to CONNECT. We aim to empower the world's freelance/workers community by creating one of the largest worker-centric decentralized ecosystem where independent workers can pursue their passions and get the value they deserve from the gig economy.

Pcoin will be usable worldwide – Use it to pay hired freelancers on the platform [crypto token for freelancers and employees], exchange on Crypto trading sites, or exchange into your preferred fiat currency and lots more.

PCoin is going to be issued with a limited amount, therefore, once PCoin spread globally, demand of the token usage on the platform and supply will play its role in value for investors/freelancers to benefit.
